

A man is standing in the center of the frame, facing forward. He is wearing a white and black safety helmet, dark safety glasses, and a blue chin strap. His jacket is dark grey or black with multiple pockets and a small yellow logo on the left chest. He is also wearing red work gloves with black palms and fingers, and black safety boots. He is holding a pair of black pliers in his right hand. The background shows a construction site with rusty metal beams and a clear sky. The ground is dirt and gravel.

SAFETY FOOTWEAR

TECHNICAL FEATURE GUIDELINES

REBEL Safety Gear work boots and shoes are designed and manufactured to comply with local and international safety regulations and standards, REBEL footwear is certified to both ISO 20345:2011 and are NRCS approved. The classification systems used to identify the protection provided by our footwear is listed below:

SB	Basic requirements for safety footwear with 200 J toecap for impact & compression.
S1	200 J toecap, closed seat region, anti-static properties, energy absorption at the seat region.
S1P	As S1 + penetration resistance.
S2	As S1 + water resistance.
S3	As S2 + penetration resistance.

Added protection can be provided and is identified on the product by it's marking:

- HRO = Sole resistant to hot contact of 300°C for 60 seconds
- P = Penetration resistance: 1100 Newton's
- M = Metatarsal protection
- WR = Water resistance
- SRA = Slip resistance – tested on a ceramic surface
- SRB = Slip resistance – tested on a metal surface
- SRC = Slip resistance – tested on ceramic and metal surfaces

Please refer to the tongue label to identify the specific safety and protection properties built-in to your pair of REBEL boots or shoes. It is important that the specific style and size of boot or shoe selected for use meets requirements for the environment and application in which it will be used.

Where the environment is not known, it is very important that consultation is carried out between the seller and the purchaser to ensure, where possible, the correct footwear is provided.

Electrostatic Discharge (ESD)

Anti-static (S1) shoes only offer a limited ability to allow charge to flow through them. ESD shoes have a sole that is more conductive, and thus offer a greater ability for charge to flow through them.

ESD shoes are the footwear of choice in an environment such as an electrical assembly plant, where a small electrostatic charge from the wearer onto a sensitive circuit board may damage the circuit board. The worker would wear an ESD pair of shoes to ensure that all the static build-up gets dissipated into the ground, and not through any other part of his or her body, such as hands.

SAFETY FOOTWEAR **CARE GUIDELINES**

REBEL safety footwear has been designed and manufactured to be worn in most industrial areas, although extreme temperatures, environments and conditions will shorten the footwear's lifespan.

It is important to take time to care for your safety footwear. Proper care will add to the lifespan of your footwear, it should ensure that the maximum comfort level is maintained for longer, and that hygienically, your shoes or boots do not contribute to health problems.

Lifespan of safety footwear

There is no set guide for how long your footwear will last. It depends on the environment in which it has been used and stored.

Storing footwear and the risk of Hydrolysis

Most safety footwear (including REBEL) soles are made from polyurethane (PU). PU has the right mix of abrasion resistance, lightweight properties and cost effectiveness. However, PU is a chemical compound which can degrade over time if it is not used regularly, or if it is stored in a dark and/or humid environment without regular use. If your boots have sat unused for a long period of time (approx. three years) and then you start using them again, there is a high risk that the sole may disintegrate, this is known as hydrolysis. We cannot be held responsible for this disintegration if it results from long periods of storage.

Water damage

Most safety footwear is made from leather. Leather is NOT waterproof, or water-resistant, unless it has been specifically treated. If your boots are repeatedly exposed to water and mud, and they are not listed as water-resistant, they will eventually crack. We will view this as improper use, and will not replace any shoes which have become damaged as a result. If you polish your boots regularly, then the polish will protect against occasional – NOT regular water exposure.

Safety footwear care tips

- Avoid scuffing the upper leather or treading on sharp edges that could cut or tear the sole.
- Clean your shoes regularly.
- Remove excess mud and dirt and wipe clean with a damp cloth and allow drying thoroughly, preferably overnight at room temperature.
- Never force dry your shoes or boots if they become wet, as direct heat may distort the upper and cause the leather to crack.
- If your footwear has a leather upper apply a good quality wax polish or shoe cream regularly.
- If your footwear has a Nubuck or suede upper it should be gently rubbed with a stiff bristled brush.
- Soles should be checked regularly and stones and metal shavings removed from the cleats.
- If the laces become worn, replace immediately to ensure a good fit.

It is very important to note that damaged footwear will not provide the necessary protection you require, and should be replaced immediately if not in a suitable condition to protect your feet.

OCCUPATIONAL FOOTWEAR

TECHNICAL FEATURE GUIDELINES

Occupational Footwear, as per ISO 20347, is designed for work environments where the risk of foot injury is low, but other occupational requirements, like slip resistance or comfort, are essential. The key characteristics include:

Special Features

Anti-slip

Superior anti-slip sole to minimise the risk of workplace accidents.

Lightweight

Super lightweight design without compromising durability.

Fluid resistant

Resistant to blood, fat and detergents. Cleat pattern specially designed to eject the accumulation of any dirt, mud, and food residues.

Foot climate

Designed to provide an optimal foot climate throughout the day.

Hygienic

Hygienic, anti-microbial and deodorising. They are washable, including the footbed.

Posture enhancing

Posture enhancing – resulting in reduced ankle, knee, hip and back pain, which enhances worker productivity.

Less Stringent Requirements

ISO 20347 footwear may include features like antistatic properties, resistance to fuel and oil, and slip resistance, but these features are not as comprehensive as those found in ISO 20345 footwear.

Technical Classifications for Occupational Footwear (ISO 20347):

OB	*Type I/**Type II	Basic requirements for occupational footwear without toecap protection.
O1	*Type I	Closed seat region, anti-static properties, energy absorption at the seat region.
O2	*Type I	As O1 + water penetration & absorption of the upper.
O3	*Type I	As O2 + penetration resistance & cleated outsole.
O4	*Type II	Antistatic properties & energy absorption at the seat region.
O5	*Type II	As O4 + penetration resistance & cleated outsole.

* Type I – Footwear is made from leather and other materials excluding all-rubber or all-polymeric footwear.

** Type II – All rubber (i.e. entirely vulcanized) or all-polymeric (i.e. entirely moulded footwear).
